

# Update Order Number

Version 1.03

## How Long Have You Been In Business?

### Overview

Update Order Number is a simple to use module that lets you set your order numbers to start at any point you wish. This is valuable when starting a new store and encountering the perception that you have not “been around long enough.”

### Installation and Licensing Instructions

Installation and licensing procedures are covered in the [Module Installation and Licensing Guide](#).

### Using Update Order Number

Once the module has been installed, assigned to your store, and the license activated, then you will see the interface.

It displays your **current** next order number, and has a text box to enter a new order ID.

Enter the number you want as your starting order number (ID). Make sure it is larger than the current next order number. Click Update.

Your next Order ID will now be set.
